

## MRs Derived for Each Subject Program using $\mu$ MT

### 1. MRs of *ATM*

**Table 1 MRs of ATM**

No	<i>R</i>	<i>R<sub>f</sub></i>
MR1	amount =amount+1, (100<=amount<=4999)	balanceDeltaTo =balanceDeltaTo+1
MR2	amount =amount-1, (101<=amount<=5000)	balanceDeltaTo =balanceDeltaTo-1
MR3	amount =2*amount, (100<=amount<=2500)	balanceDeltaTo =2*balanceDeltaTo
MR4	amount =0.5*amount, (200<=amount<=5000)	balanceDeltaTo =0.5*balanceDeltaTo
MR5	amount =2*(amount+1), (100<=amount<=2499)	balanceDeltaTo =2*balanceDeltaTo+2
MR6	amount =2*amount+1, (100<=amount<=2499)	balanceDeltaTo =2*balanceDeltaTo+1
MR7	amount =0.5*(amount-1), (201<=amount<=5000)	balanceDeltaTo =0.5*balanceDeltaTo-0.5
MR8	amount =0.5*amount-1, (202<=amount<=5000)	balanceDeltaTo =0.5*balanceDeltaTo-1
MR9	amount =2*(amount-1), (201<=amount<=2501)	balanceDeltaTo =2*balanceDeltaTo-2
MR10	amount =2*amount-1, (201<=amount<=2500)	balanceDeltaTo =2*balanceDeltaTo-1
MR11	amount =0.5*(amount+1), (201<=amount<=5000)	balanceDeltaTo =0.5*balanceDeltaTo+0.5
MR12	amount =0.5*amount+1, (201<=amount<=5000)	balanceDeltaTo =0.5*balanceDeltaTo+1

Note that *amount* represents the transfer amount and *balanceDeltaTo* represents the balance change of the transferee after the transfer. Among them, “*X*” represents the source test case variable, and “*X*” represents the corresponding follow-up test case variable.

### 2. MRs of *BillCal*

**Table 2 MRs of BillCal**

No	<i>R</i>	<i>R<sub>f</sub></i>
1. planType=A, planFee=46, 50<=talkTime<=8000 & flow<=150		
MR1	talkTime =talkTime+1,(50<=talkTime<=7999)	bill =bill+0.25
MR2	talkTime =talkTime-1, (51<=talkTime<=8000)	bill =bill-0.25
MR3	talkTime =2*talkTime, (50<=talkTime<=4000)	bill =bill+0.25*talkTime
MR4	talkTime =0.5*talkTime, (100<=talkTime<=8000)	bill =bill-0.25*0.5*talkTime
MR5	talkTime =2*(talkTime+1), (50<=talkTime<=3999)	bill =bill+0.5+0.25*talkTime
MR6	talkTime =2*talkTime+1, (50<=talkTime<=3999)	bill =bill+0.25+0.25*talkTime
MR7	talkTime =0.5*(talkTime-1), (101<=talkTime<=8000)	bill =bill-0.25*0.5*talkTime-0.5*0.25
MR8	talkTime =0.5*talkTime-1, (102<=talkTime<=8000)	bill =bill-0.25*0.5*talkTime-0.25
MR9	talkTime =2*(talkTime-1), (51<=talkTime<=4001)	bill =bill-0.5+0.25*talkTime
MR10	talkTime =2*talkTime-1, (50<=talkTime<=4000)	bill =bill-0.25+0.25*talkTime
MR11	talkTime =0.5*(talkTime+1), (100<=talkTime<=8000)	bill =bill-0.25*0.5*talkTime+0.5*0.25
MR12	talkTime =0.5*talkTime+1, (100<=talkTime<=8000)	bill =bill-0.25*0.5*talkTime+0.25
2. planType=A, planFee=96, 96<=talkTime<=8000 & flow<=240		
MR13	talkTime =talkTime+1,(96<=talkTime<=7999)	bill =bill+0.15

MR95	$\text{flow\_} = 0.5 * (\text{flow} + 1), (160 \leq \text{flow} \leq 1000)$	$\text{bill\_} = \text{bill} - 0.3 * 0.5 * \text{flow} + 0.5 * 0.3$
MR96	$\text{flow\_} = 0.5 * \text{flow} + 1, (160 \leq \text{flow} \leq 1000)$	$\text{bill\_} = \text{bill} - 0.3 * 0.5 * \text{flow} + 0.3$

Note that *planType* represents the package type; *planFee* represents the basic monthly fee of the package; *talkTime* represents the user's talk time; *flow* represents the user's data traffic; and *bill* represents that the call fee needs to be paid. Among them, “X” represents the source test case variable, and “X\_” represents

the corresponding follow-up test case variable.

### 3. MRs of *BaggBill*

Note that *name* represents the product name; *price* represents the price of the product; *imported* represents whether the product is an imported product; *quantity* represents the quantity of goods purchased; *area* represents the region to which the product belongs; *taxcost* represents the sum of the additional taxes to be paid. Among them, “X” represents the source test case variable, and “X\_” represents the corresponding follow-up test case variable.
